

MedinCell launches a Global Offering for approximately 25 million euros

Euronext: FR0004065605 - MEDCL • Montpellier - France 11 May 2023 – 17h40 CEST

The Global Offering of approximately 25 million euros aimed at institutional investors via a Private Placement through an accelerated book-building process, as well as retail investors via PrimaryBid platform only in France.

Funds raised will enable MedinCell to continue portfolio development and strengthen R&D activities.

U.S. FDA granted approval on April 28, 2023 for UZEDY™, the first innovative treatment formulated with MedinCell's BEPO® technology platform and now commercialized by Teva. Two other products based on the same technology platform, are already in phase 3 and several others are in development.

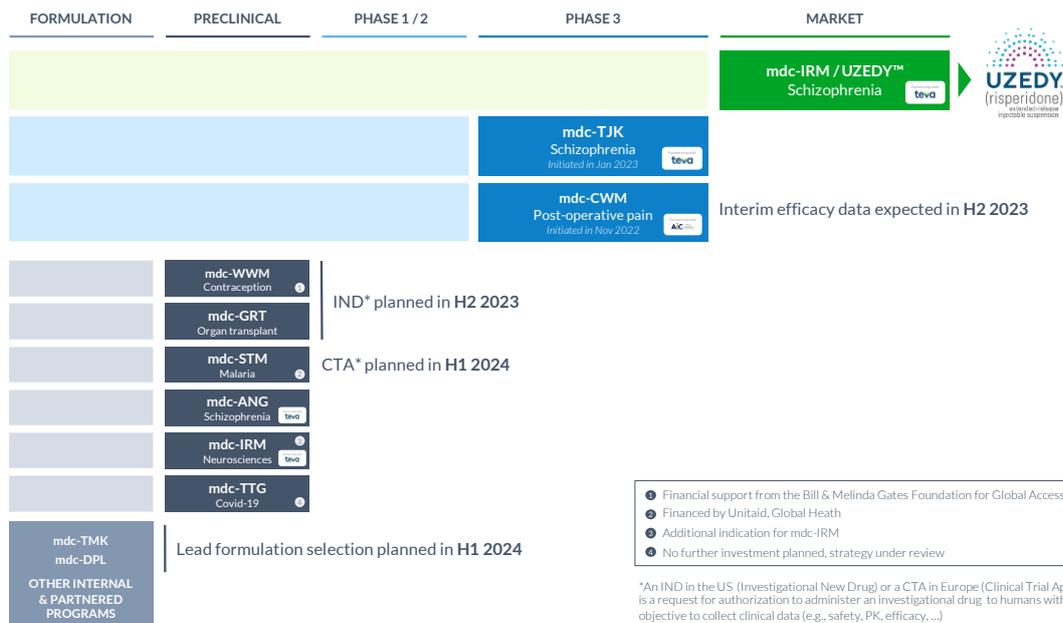

MedinCell, a commercial-stage pharmaceutical technology company developing a portfolio of long-acting injectable products in various therapeutic areas (the "Company"), announces today the launch of a Global Offering (as defined below) of approximately €25 million, through an offering to institutional investors via a Private Placement and to retail investors via the PrimaryBid platform.

"The FDA approval for UZEDY™ encourages us to accelerate the development of our clinical pipeline and raise funds from the capital markets. It is very important for us to allow individual shareholders to participate in this operation, with the same conditions than institutional investors" said Christophe Douat, CEO of MedinCell before adding: "Teva, which now markets UZEDY™ in the US, is an ideal partner to make it a reference treatment in schizophrenia and to harvest its full commercial potential. Beyond this first product, we have a solid portfolio of investigational treatments in several therapeutic areas, all of which are based on the same technology underpinning UZEDY™. Two major products are already in Phase 3 with results expected in the next 18 months, and three others should enter the clinical phase in the next 12 months."

The net proceeds from the Global Offering (as defined below), combined with the Company's existing funds, are intended to contribute to finance:

- preclinical and clinical activities for Company's programs, in particular:
 - the clinical Phase 1 of mdc-GRT
 - preclinical and clinical activities of several investigational products such as mdc-TMK and mdc-DPL,
- formulation activities of new products
- investments to expand and improve the laboratory in Jacou,
- research, development and industrialization of new technologies,
